COMP 3613 Assignment 1

Individual report

Field	Value
Student name	Kris Partapsingh
Student ID	816045792
Deployed app	https://faststarter-ekp8.onrender.com/
Logins	`bob` / `bobpass` - regular user · `admin` / `adminpass` - administrator
Skill integrity	PASS. Root e84cd692d0b8...ccff5c8beb

The YouTube video must show this name and must not show or say this ID. App logins belong in this report. Database passwords do not.

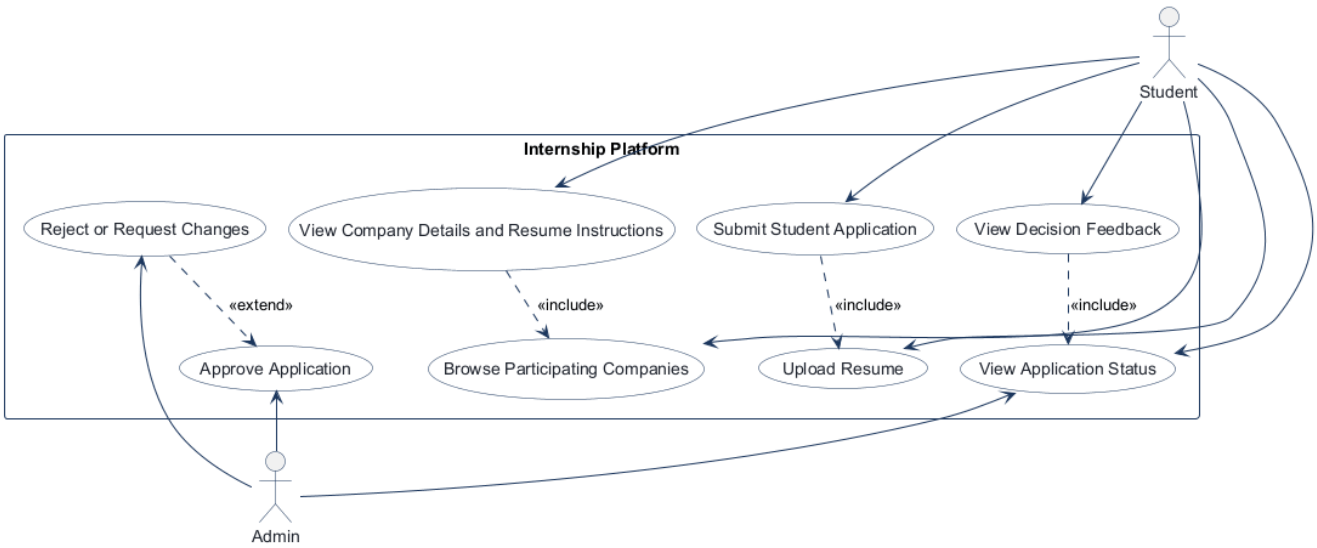

Name and ID

Name: Kris Partapsingh Student ID: 816045792

Project description

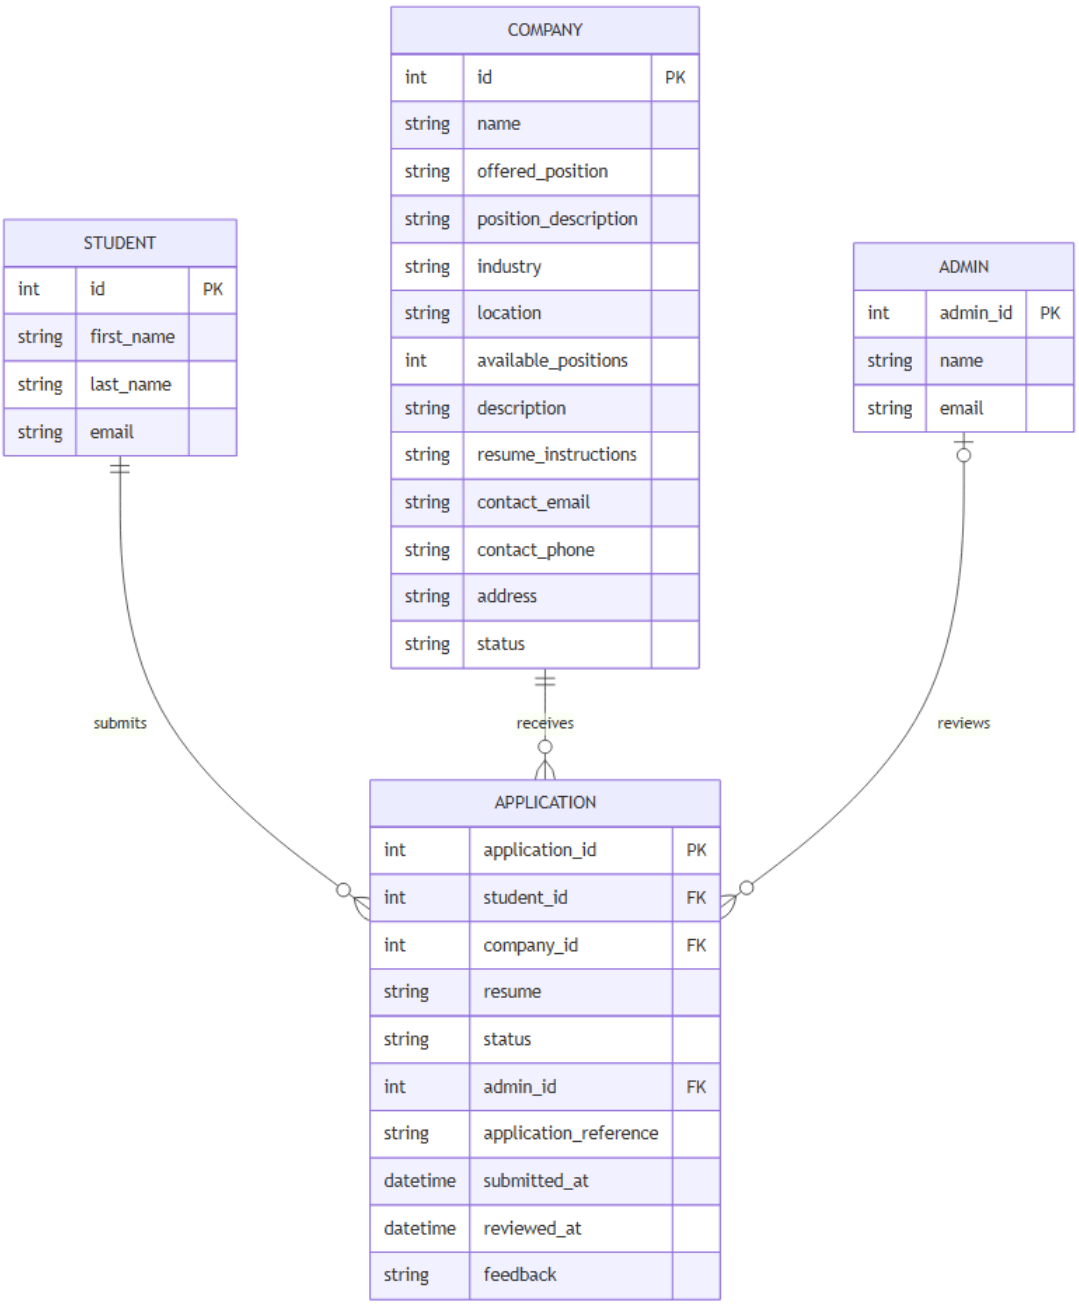

MyIntern is an internship platform where students browse participating companies, submit resumes, and track application decisions. Administrators review applications and record decisions with feedback.

Use case diagram

[Human: insert the final use-case diagram screenshot if required.]

Entity relationship diagram

Application wireframe

[Human: insert or verify the wireframe screenshot.]

Test plans

0. Approach and environment

Level	What it proves	Tooling	How it is run
Unit	One module in isolation (functions, services, repositories, dependencies)	pytest, in-memory SQLite, mocks where a collaborator is not under test	pytest tests/unit -v
Integration	Routes, auth, services, repositories and database working together	pytest + FastAPI TestClient, in-memory SQLite	pytest tests/integration -v
API	The deployed contract as an external client sees it	Postman collection with test scripts (Newman-compatible)	Postman Collection Runner
User acceptance	A person can complete each workflow described by the wireframes	Manual, against the running app	Tester follows the steps and records Pass/Fail

Test data (seeded by python manage.py init): users bob / bobpass (regular_user) and admin / adminpass (admin); companies ABC Technologies Ltd. (available), Caribbean Business Services (available), Island Finance Group (full).

Business rules under test: one active application per student per company; applications to full companies are automatically rejected; resumes must be PDF, DOC or DOCX up to 5 MB; admins cannot apply; rejecting or requesting changes requires feedback; decisions can be revised; students see only their own applications.

1. User Acceptance Test Plan

Tester runs each task in the browser against the running app (python manage.py init, then python manage.py run, then open http://127.0.0.1:5000). Record Pass or Fail and any note in the results table.

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-01	Register and sign in	New user	App running; landing page open	1. Open / and click Register. 2. Fill first name, last name, username, email, password. 3. Submit. 4. Sign in with the new account.	Success message shown after registering; sign-in lands on the student home page showing the user's name.	Auth screens (not in storyboard); signed-in header as in Wireframe 1
UAT-02	Browse participating companies	Student (bob)	Logged in as bob	1. Click Companies in the navigation.	All 3 seeded companies are listed with industry, location and an availability badge; Island Finance Group is marked Full.	Wireframe 1

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-03	Search and filter companies	Student (bob)	On the Companies page	1. Search for ABC. 2. Clear the search. 3. Set availability to Full. 4. Clear it and choose an industry, then a location.	Each action narrows the list correctly (e.g. ABC shows only ABC Technologies Ltd.; Full shows only Island Finance Group); clearing restores all.	Wireframe 1 (search bar and dropdowns)
UAT-04	View company details	Student (bob)	On the Companies page	1. Click View details on ABC Technologies Ltd.	Company description, position offered, contact details and an Apply for this position button are shown.	Wireframe 1 and 2
UAT-05	Full company cannot be applied to	Student (bob)	On the Companies page	1. Open Island Finance Group details.	Page states the company is full; no Apply button is shown.	Wireframe 1 (full companies have no apply option)

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-06	Submit an application	Student (bob)	Logged in; no previous application to ABC	1. Open ABC Technologies Ltd. and click Apply. 2. Choose a small PDF resume. 3. Submit.	Confirmation page shows an APP-XXXXXXXX reference, the company and status Pending.	Wireframe 2 (confirmation panel)
UAT-07	Duplicate application is not accepted	Student (bob)	UAT-06 completed	1. Open ABC Technologies Ltd. apply form again. 2. Upload a resume and submit.	A warning explains the duplicate was not accepted; the original application still shows status Pending in My Applications.	Wireframe 2 (existing status shown instead of a new submission)

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-08	Invalid resume file is refused	Student (bob)	On an apply form	1. Choose a .txt file (select All files in the picker). 2. Submit.	Submission is refused with a clear message that only PDF, DOC or DOCX up to 5 MB are allowed; no application is created.	Wireframe 2 (PDF, DOC or DOCX, max 5MB)
UAT-09	View my applications	Student (bob)	UAT-06 completed	1. Click My Applications.	Table lists each application with company, status, submitted date and reference.	Wireframe 3 (left)

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-10	Admin requests changes with feedback	Admin	bob has a Pending application; logged in as admin	1. Open Review applications. 2. Find bob's application and open its resume link. 3. Enter feedback Please add your GPA. 4. Click Request changes.	Confirmation page shows status Changes requested and the feedback; the review queue shows the updated status.	Wireframe 3 (right) and 4
UAT-11	Student sees admin feedback	Student (bob)	UAT-10 completed	1. Log in as bob. 2. Open My Applications.	Application shows status Changes requested together with the admin's feedback text.	Wireframe 3 (left)

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-12	Admin revises decision to approved	Admin	UAT-10 completed	1. Reopen the same application in the review queue. 2. Enter feedback Approved, welcome aboard. 3. Click Approve.	Status becomes Approved and the new feedback replaces the old; bob sees Approved after refreshing My Applications.	Wireframe 4
UAT-13	Reject or request-changes requires feedback	Admin	A Pending application exists	1. Leave feedback empty. 2. Click Reject.	A message says feedback is required; the application status is unchanged.	Wireframe 4 (Feedback / Reason is a required field)
UAT-14	Access control	Anonymous user and student	App running	1. Logged out, open /companies. 2. Log in as bob and open /admin.	Logged out: sign-in-required page. As bob: access-denied page and no admin data visible.	Not in storyboard (authorization)

ID	Task	Role	Preconditions	Steps	Success criteria	Wireframe ref
UAT-15	Log out	Any logged-in user	Logged in	1. Click Log Out. 2. Press browser Back, or open /app.	User is returned to the login page; protected pages require signing in again.	Wireframe 1 (Log Out in sidebar)

UAT results (complete after testing)

Tester name: Kris Partapsingh Date: 2026-11-10 Build/commit: b5c1ebc

ID	Result (Pass/Fail)	Observed behaviour / notes	Screenshot
UAT-01	Pass	Registration and sign-in completed; student home page displayed.	UAT1_1, UAT1_2, UAT1_3
UAT-02	Pass	Companies page listed all seeded companies and availability states.	UAT2
UAT-03	Pass	Search and availability/industry /location filters narrowed and restored results.	UAT3
UAT-04	Pass	Company detail page showed position, description, contact details, and apply action.	UAT4

ID	Result (Pass/Fail)	Observed behaviour / notes	Screenshot
UAT-05	Pass	Full company remained visible without an apply action.	UAT5
UAT-06	Pass	Application submission produced an application reference and pending status.	UAT6_1, UAT6_2
UAT-07	Pass	Duplicate active application was rejected with a warning and the original remained unchanged.	UAT7
UAT-08	Pass	Invalid resume extension was refused with an explanatory validation message.	UAT8
UAT-09	Pass	My Applications displayed company, status, date, and reference.	UAT9
UAT-10	Pass	Admin requested changes and saved feedback on the application.	UAT10
UAT-11	Pass	Student viewed the changes-requested status and administrator feedback.	UAT11

ID	Result (Pass/Fail)	Observed behaviour / notes	Screenshot
UAT-12	Pass	Admin revised the decision to approved and updated feedback.	UAT12
UAT-13	Pass	Empty feedback was rejected and the application decision remained unchanged.	UAT13
UAT-14	Pass	Anonymous and student access restrictions showed the expected sign-in/access-denied pages.	UAT14_1, UAT14_2
UAT-15	Pass	Logging out returned the user to login and protected pages required authentication.	UAT15

2. Unit Test Plan

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-01	utilities/security	encrypt_password hashes a password	"pass123"	Returns a non-empty string different from the input	Pure function
UT-02	utilities/security	verify_password with the correct password	Hash of pass123, check pass123	Returns True	Pure function

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-03	utilities/security	verify_password with a wrong password	Hash of pass123, check wrong	Returns False	Pure function
UT-04	utilities/security	create_access_token payload	{"sub":"7", "role":"admin"}	Decoded token has sub 7, role admin and a future exp	Pure function
UT-05	utilities/security	create_access_token expiry	expires_delta = -1 minute	jwt.decode raises ExpiredSignatureError	Pure function
UT-06	utilities/pagination	Pagination page maths and flags	25 items, limit 10, pages 1, 2, 3	total_pages=3; has_prev F/T/T; has_next T/T/F; next_num/prev_num correct	Pure class
UT-07	utilities/flash	flash and get_flashed_messages	Fake request object with a session dict	Messages stored with type; retrieval returns them and empties the list; second call returns []	Fake request
UT-08	dependencies/auth	get_current_user without credentials	No header, no cookie	Raises HTTPException 401	Fake request, in-memory DB

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-09	dependencies/auth	get_current_user with a tampered token	Cookie access_token=garbage	Raises HTTPException 401	Fake request, in-memory DB
UT-10	dependencies/auth	get_current_user with a Bearer header	Valid token in Authorization: Bearer ...	Returns the matching User	Fake request, in-memory DB
UT-11	dependencies/auth	get_current_user with a cookie	Valid token in access_token cookie	Returns the matching User	Fake request, in-memory DB
UT-12	dependencies/auth	is_admin	User with role admin, user with role regular_user	True for admin, False for regular user	Plain objects
UT-13	services/auth_service	authenticate_user valid credentials	Mock repo returns user with hashed password	Returns a token whose sub equals the user id and role matches	Mocked repository
UT-14	services/auth_service	authenticate_user wrong password	Mock repo returns user; wrong password	Returns None	Mocked repository
UT-15	services/auth_service	authenticate_user unknown user	Mock repo returns None	Returns None	Mocked repository

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-16	services/auth_service	register_user builds the new user	Names with surrounding spaces	Names stripped, password stored hashed (not equal to input), role regular_user	Mocked repository
UT-17	services/auth_service	register_user duplicate	Mock repo reports existing username or email	Raises HTTPException 409	Mocked repository
UT-18	services/company	list_companies with no filters	3 seeded companies	Returns 3, ordered by name	In-memory DB
UT-19	services/company	list_companies normalises availability	"Available" and " FULL "	Treated as available and full	In-memory DB
UT-20	services/company	list_companies accepts the avaliable typo	"avaliable"	Treated as available	In-memory DB
UT-21	services/company	list_companies invalid availability	"maybe"	Raises ValueError	In-memory DB

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-22	services/company	list_companies search	search="abc"	Case-insensitive partial match on name returns ABC Technologies Ltd. only	In-memory DB
UT-23	services/company	filter_options	3 seeded companies	Returns sorted, de-duplicated industries and locations	In-memory DB
UT-24	services/company	get_company unknown id	id 999	Returns None	In-memory DB
UT-25	services/application	submit unknown company	company_id 999	Raises HTTPException 404	In-memory DB, temp upload dir
UT-26	services/application	submit happy path	Student, available company, small PDF	Status pending; reference matches ^APP-[0-9A-F]{8}$; resume path starts /static/uploads/; file exists in temp dir; was_duplicate False	In-memory DB, temp upload dir

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-27	services/application	submit to a full company	Company with status full	Application saved with status rejected	In-memory DB, temp upload dir
UT-28	services/application	submit duplicate active application	Student already has a pending application to the company	Returns the existing application unchanged with was_duplicate True; still only 1 row	In-memory DB, temp upload dir
UT-29	services/application	submit after a rejected application	Previous application status rejected	New application is created	In-memory DB, temp upload dir
UT-30	services/application	submit invalid file type	resume.exe	Raises HTTPException 400; no file written	In-memory DB, temp upload dir
UT-31	services/application	submit oversize file	Resume larger than 5 MB	Raises HTTPException 400; no file written	In-memory DB, temp upload dir
UT-32	services/application	submit creates a Student row if missing	User id with no Student record	Student row created with the user's name and email	In-memory DB, temp upload dir

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-33	services/review	decide approved	Pending application, admin id 1, feedback Good	Status approved; admin_id set; reviewed_at set; feedback saved; Admin row created if missing	In-memory DB
UT-34	services/review	decide invalid decision	"maybe"	Raises HTTPException 400	In-memory DB
UT-35	services/review	decide unknown application	id 999	Raises HTTPException 404	In-memory DB
UT-36	services/review	decide requires feedback for reject and request-changes	rejected and changes_requested with blank feedback	Raises HTTPException 400; application unchanged	In-memory DB
UT-37	services/review	decide can be revised	Decide changes_requested, then approved	Second decision overwrites status and feedback	In-memory DB

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-38	services/dashboard	student_summary counts	Two students with mixed statuses	Counts include only that student's applications; pending count includes pending, under_review, changes_requested	In-memory DB
UT-39	services/dashboard	admin_summary counts	Mixed statuses across students	Totals, pending, approved, rejected and available-company counts are correct; at most 5 recent applications	In-memory DB
UT-40	repositories/user	UserRepository create and lookups	Create a user	get_by_username, get_by_id, get_by_email return it; duplicate username raises	In-memory DB

ID	Module (app/)	Behaviour tested	Input / setup	Expected result	Isolation
UT-41	repositories/application	Application Repository active and latest queries	Rejected plus pending applications	active_for_student_company ignores rejected; latest_for_student_company returns the newest	In-memory DB
UT-42	repositories/company	CompanyRepository.list_companies combined filters	industry + location	Only companies matching both are returned	In-memory DB

3. Integration Test Plan

All run through TestClient against a fresh in-memory database seeded with the users and companies above (plus a second student for ownership checks).

ID	Area	Endpoint	Scenario	Expected result
IT-01	Auth	POST /api/auth/register	Valid new user	201; body has id, username, email; no password field
IT-02	Auth	POST /api/auth/register	Duplicate username	409
IT-03	Auth	POST /api/auth/register	Invalid email format	422

ID	Area	Endpoint	Scenario	Expected result
IT-04	Auth	POST /api/auth/login	Valid credentials (bob)	200; access_token, token_type=bearer, role=regular_user
IT-05	Auth	POST /api/auth/login	Wrong password	401 JSON
IT-06	Auth	GET /api/auth/me	Valid Bearer token	200; matches the logged-in user
IT-07	Auth	GET /api/auth/me	No token	401 with a JSON body (not an HTML page)
IT-08	Auth	GET /api/auth/me	Tampered token	401
IT-09	Companies	GET /api/companies	Authenticated	200; list of 3 seeded companies
IT-10	Companies	GET /api/companies	No token	401
IT-11	Companies	GET /api/companies?search=&availability=	Search ABC; availability=full	Only ABC returned; only Island Finance returned
IT-12	Companies	GET /api/companies?availability=maybe	Invalid availability	400
IT-13	Companies	GET /api/companies/{id}	Existing id; unknown id	200 with full details; 404

ID	Area	Endpoint	Scenario	Expected result
IT-14	Applications	POST /api/applications	Student uploads a PDF to an available company	201; status pending; reference APP-XXXXXXX
IT-15	Applications	POST /api/applications	Upload a .exe file	400; no application created
IT-16	Applications	POST /api/applications	Second application to same company while one is active	409; original unchanged
IT-17	Applications	POST /api/applications	Apply to a full company	201 with status rejected
IT-18	Applications	POST /api/applications	Admin attempts to apply	403
IT-19	Applications	POST /api/applications	Unknown company id	404
IT-20	Applications	GET /api/applications/me	Two students each applied	Each student sees only their own applications
IT-21	Applications	GET /api/applications/{id}	Own application; another student's application	200; 403
IT-22	Admin	GET /api/admin/applications	Admin; student; anonymous	200 with all applications; 403; 401

ID	Area	Endpoint	Scenario	Expected result
IT-23	Admin	PUT /api/admin/applications/{id}/decision	Approve a pending application	200; status approved; reviewed_at set
IT-24	Admin	PUT /api/admin/applications/{id}/decision	Reject with empty feedback	400; status unchanged
IT-25	Admin	PUT /api/admin/applications/{id}/decision	Invalid decision value; unknown id	400; 404
IT-26	Workflow	Multiple	Student applies, admin requests changes with feedback, student sees status and feedback, admin approves	Every step succeeds; final status approved and latest feedback visible to the student
IT-27	Users	GET /api/users	Admin; student; anonymous	200 list without password fields; 403; 401
IT-28	HTML	POST /login	Valid student and valid admin	303 to /app and /admin respectively; access_token cookie set
IT-29	HTML	POST /login	Invalid credentials	303 to /login; no cookie

ID	Area	Endpoint	Scenario	Expected result
IT-30	HTML	GET /companies	No login	Status 401 with the HTML sign-in-required page
IT-31	HTML	GET /admin	Logged in as student	Status 403
IT-32	HTML	GET /companies	Logged in as student	200; page contains the seeded company names
IT-33	HTML	GET /logout	Logged in	303 to /login; cookie cleared
IT-34	HTML	GET /health	No login	200 {"ok": true}

4. API Test Plan (Postman)

The Postman collection runs in dependency order and contains 28 requests with 57 assertions. PM-15 creates the application and stores applicationId before the dependent application and admin requests execute.

ID range	Coverage	Expected result
PM-01-PM-08	Health and authentication	Health succeeds; registration, login, token, and unauthenticated checks pass.
PM-09-PM-14	Company listing and access	Listing, search, validation, detail, missing-resource, and unauthorized checks pass.

ID range	Coverage	Expected result
PM-15-PM-20	Application submission	Pending, duplicate, full-company, invalid-file, own-list, and admin-forbidden checks pass.
PM-21-PM-26	Admin decisions and student status	Role checks, request-changes, empty-feedback rejection, approval, and status visibility pass.
PM-27-PM-28	User administration	Admin listing excludes passwords and students are denied.

Implementation

Repository link: https://github.com/Locktus/myIntern_Comp3613a1

Test files:

- tests/unit/test_security.py
- tests/unit/test_pagination_flash.py
- tests/unit/test_auth_dependency.py
- tests/unit/test_services.py
- tests/integration/test_api.py

Postman collection: postman/MyIntern_API.postman_collection.json

Deployed app

https://faststarter-ekp8.onrender.com/

Logins

- bob / bobpass - regular user
- admin / adminpass - administrator

Reports

- Unit test run screenshot:

Session transcripts

Filled when the Guide builds the report: the agent writes chat markdown into docs/transcripts/; python manage.py report packages them.

Guide packaged **2** chat(s) in docs/transcripts/ (and docs/transcripts.zip).

Index: docs/transcripts/INDEX.md

- admin-profile-polish
- main-build-session

Competency (student-judge)

Filled by Guide from the student-judge run when this report was built.

Judged at: 2026-11-10T13:45:00-04:00 **Evidence pass:** re-read current report, diagrams, wireframe, test plans, two Guide transcript markdown files, and current evidence files; prior judge.md ignored

Student / session: Kris Partapsingh / COMP 3613 Internship Platform **Artifact:** Guide chats for this project and the Guide-written docs/transcripts dump **Phases in evidence:** 1-6 (COMP 3613; Phase 5 polish, Phase 6 deploy)

Totals

Item	Count / value
Metrics on rubric	12 (M1-M12)
N/A (excluded)	0
Metrics scored	12
Scoreable max	48
Awarded total	44 / 48
Overall (avg of scored)	3.7 / 4
Impression mark	19 / 20

Scorecard

ID	Metric	Score / 4	Avg	Evidence
M1	Phase discipline	4	yes	"Start Phase 2", "Start Phase 3", "Start Phase 4", then "Start Phase 5", followed by Phase 6 and later polish.
M2	Problem framing	4	yes	The report records three named workflows, shared status/feedback, entity properties, business rules, wireframes, and the MyIntern visual direction.
M3	Decision ownership	4	yes	"Update the use case, workflow, and entity diagram after Phase 5" and later targeted workflow and navigation decisions show ownership of the product decisions.

ID	Metric	Score / 4	Avg	Evidence
M4	Artefact-before-code	4	yes	"Confirm the wireframe folder and report ERD issue" shows the student engaged the required artefacts before implementation was treated as complete.
M5	Verification habit	4	yes	"Polish dashboard placeholders and remaining wireframe differences" plus the current UAT evidence table show observation followed by further correction.
M6	Assignment fit	4	yes	The current report documents wireframe-aligned workflows, layered routes/services/repositories/models, seeded roles, tests, and deployment.
M7	Slice explanation	3	yes	The student gave concrete workflow and mismatch directions; no explicit Phase 5 code-check snippet block is present in the available transcript dump.
M8	Prompt quality	4	yes	Prompts were phase-directed early and became concrete implementation/polish requests such as "Fix duplicate application behavior, admin navigation, report fields, signup profile details, and sidebar labels."
M9	Response to pushback	4	yes	The student continued with dashboard, profile, company-detail, duplicate-application, navigation, and report refinements rather than accepting the first build.
M10	Integrity	4	yes	No evidence of edited skills, answer-seeking, transcript gaming, or external-LLM paste-back was found; the report skill-integrity marker is pass.
M11	Provenance continuity	4	yes	The implementation remained tied to the Internship Platform workflows, ERD, wireframe storyboard, deployed URL, and later observed mismatches.

ID	Metric	Score / 4	Avg	Evidence
M12	Sincerity trajectory	3	yes	The available chats show a consistent progression from phase starts through deployment and repeated polish, but no machine-readable sincerity blocks were available.

Strengths

• Clear ownership of three workflows and their edge cases.
• Strong wireframe-to-implementation continuity.
• Multiple rounds of concrete verification and polish after the initial build.
• Current evidence now covers unit, integration, Postman, and all 15 UAT rows.
• Layered architecture, role-aware behavior, deployment, and non-destructive migrations are documented.

Gaps (priority order)

1. The available transcript dump does not contain explicit Phase 5 code-check snippets, so M7 is not awarded the maximum.
2. Earlier Guide chats are represented by condensed markdown transcripts rather than complete raw-turn exports; this limits confidence in fine-grained process evidence.

Phase gate status

Phase	Status	Note
1	met	Project and three workflows selected.
2	met	Use-case boundaries, shared status, and edge cases documented.
3	met	Entities, properties, relationships, and business rules documented.
4	met	Student storyboard wireframe is embedded and covers the named workflows.
5	met	Theme, implementation, automated checks, UAT evidence, and substantial polish completed.
6	met	Public Render URL, marker logins, report fields, and video URL are recorded.

Recommended next practice

• Record one thin-route and service/repository code-check snippet for each new workflow so architecture ownership is easier to audit.

Integrity note

• Clean. No evidence of suspected external assist / paste-back or edited skills.

Provenance flags

• None.

Sincerity log summary

• Blocks found: 0 | max round: N/A | min/mean/final confidence: N/A | trend: N/A | cleared: N/A

Skips

• Skips: 0/3 used.

Skill integrity

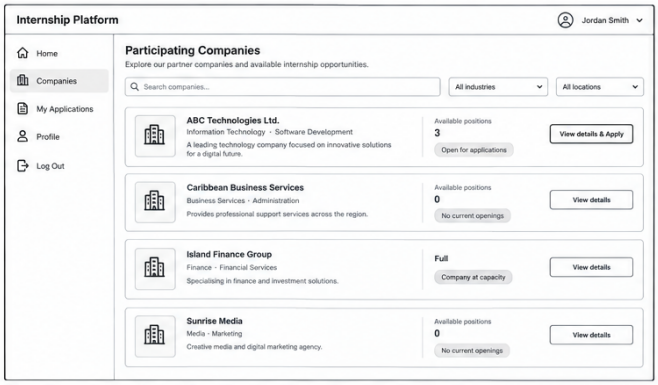

Course skills are hashed at export and compared to .agents/skills.lock.json. Do not edit .agents/skills/, .cursor/skills/, or AGENTS.md.

Wireframes

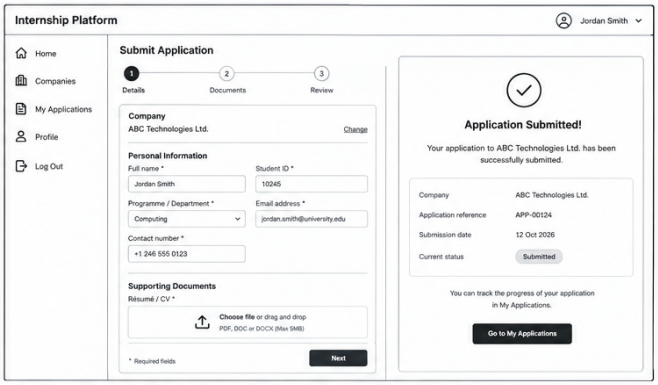

Internship Platform UI Wireframe Storyboard

1. Browse Participating Companies (Student View)

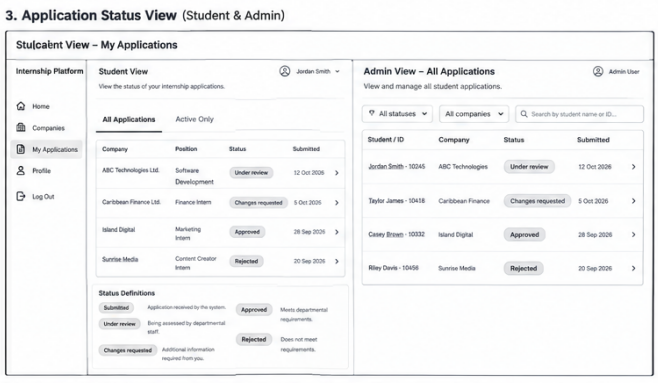

Shows all participating companies. Companies with open positions have an "Apply" button. Full companies and those with no current openings still appear, but without an apply option.

2. Application Form & Confirmation (Student View)

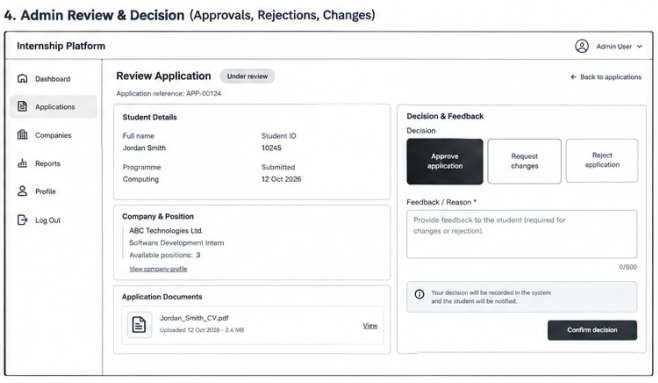

Left: application form with required fields and document upload. Right: confirmation after successful submission.
If a student already has an active application to the company, the form would show their existing status instead of allowing a new submission.

3. Application Status View (Student & Admin)

Left: student view shows only the student's own applications. Right: administrator view shows all applications with filters and search.

4. Admin Review & Decision (Approvals, Rejections, Changes)

Admin can approve, request changes (with feedback), or reject an application. The student is notified of the decision, and the reason is recorded in the system.

Full Guide chats written by the agent at report build time.

Admin and profile polish session

This is a condensed transcript of the separate native Copilot session that was ended during the prompt. It contains only the accessible user request and the resulting implementation evidence.

Student turn

The student requested that admins be prevented from applying, that both roles receive profile pages, and that company pages show descriptions, position details, contact information, and business address.

Assistant work

• Added a read-only company detail route and admin application guard.
• Added profile navigation and a profile template.
• Added company contact and address fields with non-destructive migration support.
• Added company detail and position information.
• The main session then completed and committed the recovered changes.

Main build session

This is a condensed transcript of the native Copilot session available for the project. It preserves the user steering and the assistant's resulting phase actions without inventing unavailable intermediate turns.

Student turns

• Start the assignment using the build skill.
• Start Phase 2.
• Start Phase 3.
• Start Phase 4.
• Confirm the wireframe folder and report ERD issue.
• Start Phase 5 and confirm the result.
• Update the use case, workflow, and entity diagram after Phase 5.
• Start Phase 6 and continue Phase 6 after manual deployment.
• Polish dashboard placeholders and remaining wireframe differences.
• Fix duplicate application behavior, admin navigation, report fields, signup profile details, and sidebar labels.
• Add the deployed URL and YouTube video URL to the report.
• Judge the session and build the report.

Assistant work

• Established the Internship Platform workflows and report artefacts.
• Created and updated the use-case diagram, ERD, workflow diagram, and wireframe references.
• Implemented MyIntern branding, company discovery, student applications, resume uploads, admin review, dashboards, filters, migrations, profiles, and role-aware navigation.
• Validated changes with local database initialization, template loading, diagnostics, and deployed /health.
• Pushed the implementation and documentation updates to GitHub.
